Welcome

Your new Vodafone Mobile Broadband USB Modem Stick lets you connect your computer to the internet over the Vodafone high-speed mobile phone network.

Browse the web
You can now access the web and any other internet service wherever there’s a mobile phone network.

Pick up emails
Keep up to date with your emails, wherever you are. You can also access your personal email accounts – even web-based accounts like Hotmail.

Send and receive SMS text messages
You can send and receive SMS text messages straight from your computer. Vodafone SMS provides an easy way to view messages, write new ones, and manage contact details.

System Requirements
To use this USB Modem Stick and the Vodafone Mobile Connect software, you need:

– A computer – running Microsoft® Windows® 7, Windows Vista™ (SP1 recommended), or Windows® XP SP3, or an Apple Mac running Mac OS® X 10.4.11 (Intel®) or 10.5.8, or above. 10.6.2 or above recommended - 10.4.11 not supported on PowerPC.
– At least 100 MB free disk space and 256 MB RAM memory
– A USB socket
– Administrator rights on your computer.
Set up your USB Modem Stick

- Insert your SIM as shown.

- If you are using a MicroSD memory card with your Stick (to allow your Stick to behave as a flash memory drive), insert the card as shown.

- Plug the USB Modem Stick firmly into your computer’s USB port.
On Microsoft Windows computers
The first time you plug your USB Modem Stick into a PC the software setup should start automatically, and proceed to set up your USB Modem Stick. If for some reason the setup does not start, right click on the VMC Lite 9.x.x.x drive in ‘My Computer’ (Start Menu, Computer for Vista machines), select Explore and double-click the file called setup_vmc_lite.exe on the USB Modem Stick. Follow the on-screen instructions.
Setting up your USB Modem Stick may take a few minutes, but once the setup is finished, the Vodafone Mobile Connect Lite software should start automatically. If for some reason the program does not start, select Vodafone Mobile Connect from the Windows Start menu.

On Mac OS X computers
The first time you plug in your USB Modem Stick, it will show up on your desktop as a Vodafone Mobile Broadband disk. Drag the Vodafone Mobile Broadband icon from the disk window into the Applications folder on your hard disk.
Double-click the Vodafone Mobile Broadband icon in your Applications folder to start the application. The application will start, identify your device, create the correct mobile connection settings and select a mobile network. Once the application is ready to connect, the Connect button will be enabled.
Software overview

1. **Connect/Disconnect**
   Connect via the mobile phone network

2. **Views**
   View data usage, and additional software settings

3. **Start SMS program**
   Send, receive and manage SMS messages and contacts

4. **Status**
   Check the status of your connection

5. **Help**
   Help Topics, plus internet and hotline support.

The first time you run the software, your USB Modem Stick will usually be set as the default device. If it is not, click 'Manage Devices' and select your USB Modem Stick there.
If a mobile network has been found, the Connect button in the Mobile Connections panel will be enabled. Clicking Connect connects to the internet across the mobile phone network. Now you can browse the web or use email.

When connected, the Connect button text changes to Disconnect and a green ‘Connected’ indicator appears below the button.

Clicking the Disconnect button will close the connection – and the text on the button will revert to Connect.

To open a mobile connection, you need to be within coverage of a mobile network. As a rule, anywhere you can make a call on your mobile phone, you should be able to connect.
Click Vodafone SMS on the navigation bar in the main window of the Vodafone Mobile Connect Lite software to open the SMS program.

To send an SMS
Click New at the left-hand end of the SMS toolbar to create a new SMS text message.

1 Address
Enter the recipients here, or choose them from Contacts

2 Message
Write your message here

3 Send
Click on the Send button to send your message.

The number displayed to the person who receives your message will be from your data SIM, not your mobile phone. Use a short 'signature' to make sure people know you sent them a message: Settings/Messages/Signature.

After your SMS has been sent, it will be stored in the Sent list.
Receiving SMS

When you receive a new message, an SMS Notification is shown briefly so you can respond to it directly.

The received message can also be read from the Inbox in the main Vodafone SMS window.

The Vodafone SMS software will receive text messages whenever you have mobile network coverage.
Click **Contacts** on the SMS navigation bar to open the Contacts list, in which you can save SMS numbers that you use frequently as contacts with names.

**New SMS Contact**
Clicking the **New** button on the SMS toolbar opens a new contact window.

Enter the name and number of your contact using the international format for the number, eg. +447774477000.
USB Modem Stick LED lights

The LED light on your USB Modem Stick shows which kind of mobile network has been found, and whether the USB Modem Stick is connected to that network.

- **Green blinking**
  A GPRS network has been found – you could connect

- **Green solid**
  Connected via GPRS

- **Blue blinking**
  A 3G network has been found – you could connect

- **Blue solid**
  Connected via 3G

- **Light blue blinking**
  A 3G Broadband network has been found - you could connect

- **Light blue solid**
  Connected via 3G Broadband.

Signal strength

The strength of the mobile network signal is shown by the symbol to the left of the Connect button, and by the icon in the Windows Notification area.

The more bars that are filled in, the better the mobile network signal quality. At least one bar must be filled in order to connect.
If you don’t see your USB Modem Stick in the list of devices
– Remove the USB Modem Stick
– Re-start your computer
– Re-insert the USB Modem Stick.

If no network can be found
– Change your physical location: in a building, move closer to a window, move higher up, or go outside
– (Windows) Select ‘View/View Available Mobile Connections’ and see if you can connect to a particular network in the list shown
– (Mac) Select ‘Connections’, open ‘Mobile Connections’, double-click the top-most settings, click ‘Select Networks’ and see if you can connect to one of the networks listed
– Contact Support, and check that data services and roaming are enabled on your account.

If no connection can be opened
– Wait a few minutes and try to connect again. This is most often a temporary problem, especially if an ‘Error 631’ or ‘Error 619’ is referenced. If it persists please call Vodafone Support on the number on the next page
– Select ‘File/Exit’ to exit the Vodafone Mobile Connect Lite software completely, and then re-start it again
– Re-start your computer
– (Windows) Click ‘Manage Devices’, select your device, click edit and then select a different network preference on the Network Preference tab page, eg. ‘3G Only’
– (Mac) Click ‘Devices’, select your device, and then select a different network preference in the drop-down menu, eg. ‘3G Only’
– If you are using a VPN (Virtual Private Network), contact your company IT administrator.

If you have problems when roaming
– (Windows) Select ‘View/Available Mobile Connections’ and try opening one of the connections shown
Vodafone Ireland customers
If you’d like to use our data services while abroad FreeFone 1800 22 55 88 to get set up. Check out www.vodafone.ie for data roaming rates at your destination.

For further help, please visit www.support.vodafone.com, or call Vodafone Support as follows:
You can contact Vodafone UK Customer Care: 191 or 08700700191
Vodafone Ireland customers should contact the Data Customer Care team on 1850 287 000, if you are using the Vodafone network, or +353429331999 if you are calling from outside of Ireland.

– (Mac) Select ‘Connections’, open ‘Mobile Connections’, double-click the top-most settings, click ‘Select Networks’ and see if you can connect to one of the networks listed
– Contact Support, and check roaming is enabled for your account
– Check the name of the current network in the Mobile Connections panel. If it is not Vodafone or a Partner, (Windows) select a different network from ‘View/Available Mobile Connections’; (Mac) select ‘Connections’, open ‘Mobile Connections’, double-click the top-most settings, click ‘Select Networks’ and see if you can connect to one of the networks listed.

If the connection keeps switching between GPRS and 3G
– (Windows) Click ‘Manage Devices’, select your device, click edit and then select a different network preference on the Network Preference tab page, eg. ‘3G Only’
– (Mac) Start the Vodafone Mobile Broadband software, click ‘Devices’, select your device, and then select a different network preference in the drop-down menu, eg. ‘3G Only’
– Switch back to your normal preference when you move locations.
(Windows) If the software does not install, or the install progress bar keeps looping
– From the Windows Start menu, select Settings>Control Panel>System>Hardware>Device Manager
– Expand ‘Universal Serial Bus Controllers’
– Right-click ‘USB Mass Storage Device’ and select ‘Uninstall’
– If your devices are not reloaded, select ‘Scan for Hardware changes’ from the ‘Action’ menu.

Check software update preferences
– Set your operating system and other programs to notify you of software updates instead of downloading them automatically—otherwise they may slow down your mobile connection, or exceed your data usage limit.

Usage indication
– The usage window only displays an indication of your data usage. Please refer to your invoice for the actual amount of data transferred.
Glossary

**Built-in data card**
Mobile data card built into notebook computer. Enables data connections over the mobile phone network.

**Data card/USB Modem stick**
A device for a computer that is used to open a data connection over the mobile phone network.

**EDGE**
An enhancement to GPRS networks offering higher speeds, although not as fast as those provided by 3G, or 3G Broadband.

**GPRS**
Stands for General Packet Radio Service, which is based on GSM, but allows higher transmission speeds for data.

**GSM**
Short for Global System for Mobile Communication. This is a standardised, open, digital mobile technology.

**3G**
Another name for UMTS (Universal Mobile Telecommunications System), 3G stands for third-generation mobile phone service and provides higher data speeds.

**3G broadband**
An enhancement of 3G, bringing even higher speeds. 3G Broadband devices are already offering speeds of up to 14.4 megabits per second.

**Roaming**
You can use your mobile device for connections on any other mobile network that has a roaming agreement with your own mobile operator, whether in your country or abroad.

**SIM**
The ‘Subscriber Identity Module’ is the small, postage-stamp-sized chip that you will have received together with your mobile subscriber contract. The SIM has gold contacts on one side.
