Vodafone Security

PC Protection installation

Protect your data and privacy when you email, download music, bank, shop or play online.

Protection by
F-Secure

Before you start

If your computer already has another anti-virus program installed, make sure you follow theinstructions below to uninstall your current anti-virus program before you start install the Vodafone Security – PC Protection software.

Uninstall other anti-virus programs

To uninstall any other antivirus programs on your computer:

Disconnect your computer from the network. **Windows 7**. Click **Start>Control Panel> Programs and Features**>Select the anti-virus software and click **Uninstall**. On **Windows 2000** and **Windows XP** Classic Start menu, click **Start>Settings>Control Panel>Add or Remove Programs**.
On **Windows XP** Start menu, click **Start >Control Panel >Add or Remove Programs.**

On **Windows Vista**, click **Start>Control Panel>Uninstall a program**. Click the programs you want to remove, and
Click **Remove (or Change/Remove)**. The antivirus programs may have several related components. Repeat steps 2 and 3 to uninstall all. Related components have the same product name. Restart your computer. Do not reconnect to the network until you have installed Vodafone Security – PC Protection.

Installation steps

Before you install the software, make sure:

- You've downloaded the Vodafone Security
  – PC Protection software from **vodafone.co.nz**
- You've received your subscription key via email.
- You've got an internet connection
- If multiple users share and use the computer, log on with administrator privileges to install this product.

To install the software

1. Download the software from the Vodafone site by selecting the **.exe file** and saving it to a desired locationon your computer.

2. Disconnect your computer from the internet. Locate where you saved the PC Protection software on your computer and double-click the **Vodafone_PC_Protection.exe** to start the installation. The software splash screen will appear and then the installation will start.

3. Click **Next** on the welcome screen to continue. Read the license agreement. To accept the agreement and continue, click **Accept**.

4. Enter your **subscription key** and click **Next** to continue. (Your subscription key is included in the confirmation email we sent you when you activated the service). Select **Automatic installation** (advanced users may want to choose the step by step installation option) and click **Next**.

5. If you didn't remove any existing security software you had installed on your computer before you started installing PC Protection, it will detect the most common conflicting software and remove this.

Because of this you may see some additional steps. Just follow the instructions on the screens that appear. Your computer will also restart if software needs to be removed. The software will then install the setup files. This will take around 5-10 minutes to complete.

6. After the installation is complete, a screen will appear to let you know and then your computer will be restarted, click Restart. After the computer restarts, connect it to the internet to allow the product to download the latest updates.
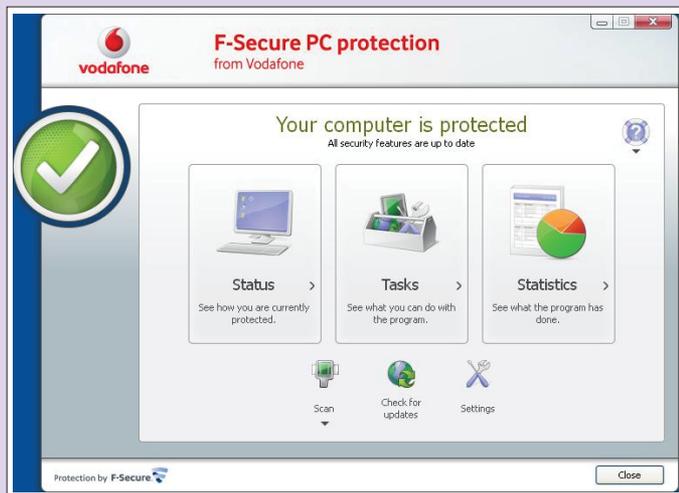

7. Downloading the updates may take some time, depending on the speed of your internet connection.The product will also validate your subscription keyat this time. Once this has completed press **Next** to continue.

8. You will then be given the option to turn on **Parental Control**. Simply select to enable or disable Parental Control and click **Next**.

9. Your installation is now complete – you can either findout more about the products or just click **Finish**. When the updates have been downloaded, the product is ready for use.

PC Protection settings
